# What you get

- *An intelligent assistant set up for your business: your apps connected, your numbers fed in live.*
- *Your numbers, live: ask, and get back the numbers you fed in, in minutes · an estimate, ready when you are.*
- *Work done by instruction: update your website, change a post, fix a document, work in an app · you ask, and it goes and does it.*
- *Sessions are live, in English or Spanish. You buy time one piece at a time · there is no package and no contract, and you stop when you feel the tool is customized enough for your purpose.*

*The pages that follow are a sample of that final product.*

# How the service works

*The road your order travels · step by step*

1

## You choose and pay

*Pick Standard or Intensive on the service page. Standard sessions are booked on Calendly; Intensive hours are paid by card on Stripe. The price is shown before you pay · nothing is added later.*

2

## You send your facts

*The thank-you page opens your intake form: what you sell, the apps and accounts you use, and where your work gets stuck. We work only from what you send · a missing fact pauses the clock, and we ask instead of inventing.*

3

## We connect and set up

*We set up the basic level the law allows us: your apps connected, and your device's apps set up on your behalf · with your permission. You approve before anything is written or changed in your accounts.*

4

## Your numbers go live

*Take a picture of an invoice. The assistant reads it and files it in your accounting app, in its place · the right seller, the right category. From then on, your numbers update as your business moves. This works as long as your business uses an AI-compatible app · or we build your own customized system from scratch.*

5

## You run it

*Ask for your numbers and get back the numbers you fed in, in minutes. Tell the assistant to do the work · website, social media, documents, apps · and it goes and does it. Sessions continue until you feel the tool is customized enough for your purpose. Then you can leave.*

*Questions before you pay? Use the Ask a Question link on the site · a human answers.*

# The two tiers

*Two ways to buy time · and you decide how much*

## Standard · $60 per session (40 minutes)

*The regular session: your machinery set up step by step, and you learning to run it. Booked on Calendly. Counted by the hour, the session works out to $90 an hour.*

## Intensive · $93 per hour

*The fullest version of the service: the benefits are prompted to the best and the top of our scope of work · everything this service can do, at full depth. For $3 more an hour than the session rate, you unlock the fullest version, with the coach's experience · more than 15 years running real operations · potentiated by the AI's computing power, applied to your specific business needs.*

*Each session does two things at once: it sets up more of your machinery (explained, connected, working), and it teaches you to run it. You stop when you feel the machinery is set up and customized enough for your purpose.*

*The machinery behind this service took $72,000 of work to build; session by session, it becomes yours.*

*Questions before you pay? Use the Ask a Question link on the site · a human answers.*

*Disclaimer: this sample is for illustration purposes only. The business is not real, and this is not a real session. We only show the work in an illustrative layout · your own sessions are live, on your own business.*

# First session · a small taqueria

Sample session. Client topic: a small taqueria · one owner, a busy counter, and a shoebox of provider invoices.
Session date: SAMPLE. Built from the client's facts, in the client's first session.

### WHERE WE STARTED

The owner's question: ‘At the end of the month, I never know if I made money until my accountant tells me · weeks later.’ Provider invoices sat in a shoebox by the register. The menu prices had not changed in two years, while every provider price around them had gone up.

### WHAT WE CONNECTED

The owner's accounting app, the shop's email, and the selling app · connected to the assistant, one at a time. Before anything was written or changed in any account, the owner saw it and approved it.

### THE FIRST NUMBERS, LIVE

The owner took a picture of a provider invoice. The assistant read it · the seller, the date, the total · and filed it in the accounting app under the right seller and the right category. Then the owner asked: ‘If this price goes up again next month, where do my numbers land?’ The estimate came back in minutes · not weeks.

### WHAT THE OWNER LEARNED

How to feed an invoice in by photo. How to ask for the numbers. How to tell the assistant to update the shop's page. The next session is the owner's to book, when they feel ready for the next piece of machinery · regular sessions while the machinery is built, fewer as they get capable, until they run it by themselves.

*Disclaimer: this sample is for illustration purposes only. The business is not real, and this is not a real session.*

# The first session · only the words, ready to copy and paste

**WHERE WE STARTED:** The owner never knew if the month made money until the accountant answered, weeks later. Provider invoices sat in a shoebox. Menu prices had not changed in two years.

**WHAT WE CONNECTED:** The accounting app, the shop email, and the selling app · connected to the assistant, one at a time, with the owner's approval before anything was written.

**THE FIRST NUMBERS, LIVE:** A photo of a provider invoice was read · seller, date, total · and filed in the accounting app, right seller, right category. Asked where the numbers land if the price rises again, the owner had the estimate in minutes.

**WHAT THE OWNER LEARNED:** Feed invoices in by photo. Ask for the numbers. Tell the assistant to do the work. Book the next session when ready · and one day, run it all by yourself.

# Your privacy

*What we keep, what we erase, and the limits the law sets*

*We protect your privacy to the full limit the law allows · and we comply with the law at the same time. This notice tells you exactly where that line is, before you pay.*

**What we collect.**
*Only what your service needs to do the work: the facts you send us, and a way to reach you. Our service forms do not ask for your real name or your email. You are identified by your username, your phone number, and your payment receipt number.*

**Who sees it.**
*Your facts stay in a private working file, handled by our AI assistant, who does the work. The owner reviews only your finished product · how it looks and its quality · not your personal information.*

**What we erase.**
*When your service ends and your payment is final, we erase your working information: your facts, your answers, and your drafts. If you come back later, we start from zero · your facts are gone.*

**What we must keep, and why.**
*The law does not allow us to erase everything:*
*· Payment records. Tax law requires us to keep receipts and payment records for years. Your payment is also processed and held by Stripe, under Stripe's own privacy policy. We never see or store your full card number.*
*· The acceptance record. Your username, your phone number, your payment receipt number, and your acceptance of the finished product · the proof that your service was delivered and accepted. Payment dispute windows stay open for months, so this record must stay with them.*
*· Screening records, on orders the law requires them for · for example, orders sent abroad.*

**What we never do.**
*We never sell your information. We never share it for marketing. We never use it for anything except your service, the records the law requires, and a dispute about your own payment.*

**Your rights.**
*You may ask us what we hold about you. You may ask us to erase everything the law allows us to erase. We will do it, and we will tell you plainly what the law required us to keep.*

**The limit, in one line.**
*We keep your information private to the full limit the law allows. Where the law requires us to keep or show a record, we follow the law · and we keep nothing beyond it.*
